Subject: West Lake Landfill RE: questions

Bari, at this time, EPA has not required the PRPs to do additional quarterly groundwater sampling events beyond the four that concluded last October. Both the PRPs and EPA are evaluating the data from those four events. The PRPs are currently preparing a summary report and analysis of the groundwater data that will evaluate the data set and attempt to draw conclusions, including contaminant concentration trends. Once this report is final EPA will release it to the public.

Feel free to call me with any other questions.

Sincerely,
Daniel R. Gravatt, PG

Subject: Re: questions

Greetings:

We have reviewed the monitoring well report you have listed below. Lots of information to process. Please keep us informed of the 2014 sampling scheduled. Please take a look at the following questions:

1. Has any groundwater sampling been conducted in the 1st quarter of 2014? If so, what will be the time frame that the

data will be completed and posted on line? - an approximate time frame. (we are aware of the soil sampling conducted at the Athletic complex in Bridgeton).

2. What are trends you can share with us. Trends we have noted consists of radioactivity remaining in the landfill and not moving off-site in the groundwater. Please provide us with details for additional trends from the analytical data.

Thank you and we look forward to hearing from you.

Subject: questions

Bari,
Below is a link to the EPA website where the West Lake groundwater monitoring reports are posted. This link is for the October 2013 event (the last West Lake event). I figured that this report might be useful to you in understanding our monitoring program for the West Lake facility. If you have further questions, please don't hesitate to contact me.
